- Oracle Farmer's
Market: Tuesdays 11-1

GREEN CORNER

A Cleaner Way to Clean

Using a high-efficiency washing machine or even just adjusting the settings on the machine you have can make a difference on the environment.

If your washing machine has a setting for the amount of clothing you're washing, choose a low setting—you'll use less water and your clothes will get just as clean. Using cold water can save up to 80% of the energy required to wash clothes. Washing your clothes in cold or warm water instead of hot water can save as much as 500 pounds of carbon dioxide per year. The average washing machine uses about 41 gallons of water per load, whereas newer, high-efficiency models use less than 28 gallons of water per load.
